

Subject: FCC should reject the National Association of Broadcasters (NAB) petition 04-160.

By rejecting this petition, the FCC allows the technologically superior satellite radio transmission format to emerge into the mainstream. Citizens of the United States should be allowed the choice of programming, including satellite transmitted programs containing locally oriented material.

Please answer the question as to the rationale behind limiting the material Satellite broadcaster can transmit? Satellite (radio) transmissions are now the only source my family uses in both our vehicles and at home.

Don't restrict Satellite radio! Please petition 04-160.
